A;Rote: each chain of the active enzyme consists of two domains; domain 1 consists appro A;Note: the 6-phosphate group of fructose 6-phosphate (F6P) is bound by His-246 from one d to Asp-124; the sugar ring is bound by Arg-249, Met-166; Glu-219, and Asp-124. ATP is A;Note: the main interaction with ADP appears to be with the beta-phosphate group, which 2 and Thr-155; the phosphate group of phosphoenolpyruvate appears to bind in the same pl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A; Molecule type: DNA

 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

SUBCELAULAR LOCATION: Intranuclear and cytoplasmic. TISSUE SPECIFICITY: Predominantly expressed in skeletal muscle. PTM: The phosphorylation of Ser-24 may prevent recognition of t nuclear localization signal.
SIMILARITY: Belongs to the actin-binding proteins ADF family.
